---

## Background

- Software Developer with more than **3 years** of experience in backend development and one year in Guidewire Integration. Have a good hands on of Guidewire Integration concepts, including plugins, messaging, and web service communication. Good with Guidewire PolicyCenter functionalities, especially in Personal Auto lines of business.

---

## Project Experience

### RCI Insurance

#### Integration Developer

- Implemented outbound integrations using Integration Gateway **Messaging**, configuring message destinations, message payloads, and handlers to reliably send data to external systems.
- Designed and developed RESTful services in Integration Gateway for synchronous and asynchronous integrations with external systems.
- Used **Helios properties** in Integration Gateway to manage environment-specific configurations and external system details.
- Collaborated with Config teams for seamless API integration and data exchange.
- Performed API testing and validation using Swagger specifications to ensure contract accuracy and reliability.
- Designed and deployed integration gateway apps including both inbound and **outbound** integration flow.
- Consume **RESTful** webservices with the help of **RESTApi Client** after jar file generation.

### FuseIT B2B

#### Backend Developer

- **Developed**, enhanced, and maintained scalable backend APIs to support core business operations, transactional workflows, and high-volume data processing, ensuring optimal performance and reliability.
- Implemented secure role-based access control (RBAC) with comprehensive input validation, centralized exception handling, and standardized error responses to enforce authorization policies and improve system stability.
- Integrated **Google Location APIs** for address validation, geocoding, and reverse geocoding, enabling accurate location mapping, improved data quality, and seamless location-based services.
- Implemented API **authentication** and **authorization** mechanisms using **tokens**, API keys, and headers to ensure secure integration with external services and prevent unauthorized access.
- Handled request/response transformation and data mapping between internal domain models and external system payloads, ensuring compatibility, consistency, and data integrity across integrations.
- Optimized backend integrations for performance and scalability by managing timeouts, connection pooling, and error recovery strategies while adhering to best integration practices.

## FuseIT B2C

### Backend Developer

- Developed and maintained RESTful web services to enable seamless and reliable communication between multiple applications and modules, ensuring consistency, scalability, and adherence to REST standards.
- Designed normalized relational database schemas and efficiently managed data using optimized **raw SQL queries**, complex joins, and indexes to ensure high performance and data integrity.
- Implemented secure **authentication** mechanisms, session management, and role-based access control (RBAC) to safeguard application resources and enforce granular user permissions.
- Built modular and reusable backend components by following the **MVC architecture**, ensuring clean separation of concerns, easier maintenance, and improved testability.
- Optimized backend performance through query tuning, efficient validations, centralized error handling, and structured exception management to enhance application stability.
- Designed versioned APIs and **backward-compatibility** strategies to ensure smooth integration with existing consumers while rolling out new features without breaking dependent systems.

---

### Work Experience

- **Protecons Solutions Pvt. Ltd** – 2022 - Present

---

### Education

- Bachelor of Technology in Information Technology from Dr. A.P.J. Abdul Kalam Technical University, 2022

---

### Technical Skills

- High Level experience in Functional Guidewire PolicyCenter.
- Have an understanding of Guidewire Integration, including plugins, messaging, entity and typelist creation, and web service configuration.
- Have a good understanding of Java and basic understanding of Gosu for backend and integration development.
- Familiar with PCF UI architecture and data model.
- Knowledge of MVC architecture and API-based system integration.
- Comfortable using tools like Git, GitHub, Postman, Android Studio and IntelliJ IDEA.
- Have a Proficient knowledge in ReactJS.
